What the sky will look like after Betelgeuse explodes

One day - perhaps tomorrow, perhaps 100,000 years later - Betelgeuse will explode in a supernova, creating one of the most impressive spectacles in the night sky that mankind has ever seen.

Astronomers Warn Betelgeuse Explosion Imminent After James Webb

Late in 2019 and early 2020, Betelgeuse got significantly darker, which led to early rumors that a supernova could be on its way. It eventually came back to normal brightness, though, ...

When Will Betelgeuse Explode , Betelgeuse Supernova , Betelgeuse Star

In July 2025, a new scientific paper confirmed that Betelgeuse is part of a binary star system. The discovery explains the star's periodic dimming and brightening -- not as signs of an imminent ...

Betelgeuse will explode someday, but WHEN?

We know that someday, Betelgeuse will explode as a supernova. Then, it might become as bright as a full moon and possibly be visible in broad daylight! But when will Betelgeuse explode?

The most fascinating star in our sky inches closer to exploding

The cold, hard truth is, it's unknown when Betelgeuse, at some 640 light-years away, will collapse into a supernova. "We don't have a way of predicting when stars will explode," Or Graur, an

Is Betelgeuse Going to Explode? - Denver Astronomical Society

This four-panel illustration shows how the southern region of the rapidly evolving, bright, red supergiant star Betelgeuse suddenly become fainter for several months during late 2019 and early 2020.
