What is lava made of? , Volcano World , Oregon State University

Lava is made up of crystals, volcanic glass, and bubbles (volcanic gases). As magma gets closer to the surface and cools, it begins to crystallize minerals like olivine and form bubbles of volcanic gases.

Lava

The hardened formation is called " lava flow," whereas the material that still contains molten rock is called an " active lava flow." The rock formed from solidified lava (or magma) is called igneous rock.

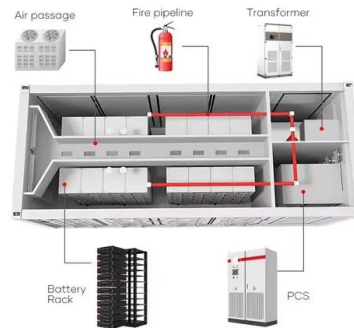

Mysterious lava puddles in Earth's mantle may hold clues about the

These gigantic "lava puddles" cling to the planet's core, some 1,800 miles (2,900 kilometers) beneath the surface -- and according to current theories of planetary evolution, they ...

Lava , Types, Composition, Temperature, & Facts , Britannica

Lava, magma (molten rock) emerging as a liquid onto Earth's surface. The term 'lava' is also used for the solidified rock formed by the cooling of a molten lava flow.
