

# **Soft start circuit of solar container inverter**

## Overview

---

The soft start circuitry controls the output voltage slope to prevent excessive inrush current, maintain a controlled output voltage, and avoid unwanted voltage overshoots and drops during power management IC start up. Read on one of the DIY Solar Fb groups that soft start creates a problem for most inverters because it prolongs the starting current spike, although at lower amplitude, and creates problems for the inverter. I've read many threads here about the benefits of adding a soft start unit to HVAC loads. Soft start is a common feature used in DC/DC buck converters. Soft start can prevent excessive inrush current and maintain a controlled output voltage during power on. This application note aims to provide a better understanding of TPS56837 soft start. First, this document introduces soft start and. Many solar installation engineers ignore the importance of pre-charging circuits. They ignore the strong impact of high current sparks on inverters and lithium battery BMS. In this video, we break from the typical method of using a resistor to pre-charge the capacitors in our inverter. Instead, we. Soft start circuits are routinely used with large motors, but the system isn't something that most people will ever see. I've worked on huge cast iron resistors that were used to 'soft-start' large motors used in pumping stations, but that is not an application that I'm going to entertain here (few. Last Updated on September 14, 2025 by Swagatam 2 Comments Here we see this circuit diagram which is full H-Bridge using 4 power MOSFETs and 2 IR2111 high side driver ICs. That means this circuit is for making full bridge inverter which converts DC into AC. We have +600V DC at top rail, written as. Inrush current/Switch-ON surge is the maximal instantaneous input current drawn by an electrical device when first turned on. Inrush current is much higher than the load's steady-state current and that's the source of many problems such as fuse blowing up, load failure, load's lifetime reduction.
