

# Solar container pack condensation water

## Overview

---

A solar collector combined with an ammonia absorption refrigeration system is a perfect match where low-grade heat energy is efficiently collected from sunlight and used to drive a cooling cycle to condense ambient humidity while providing refrigeration and room cooling. Powerful Function: The solar ventilator has two Powerful ventilation fans, blowing fresh air into the container, accelerating air circulation, making the air inside and outside the container the same, with little temperature difference, effectively preventing condensation in winter and overheating. Conventional atmospheric water condensers are technically feasible but cost-prohibitive because of fuel or electricity consumption. A solar collector combined with an ammonia absorption refrigeration system is a perfect match where low-grade heat energy is efficiently collected from sunlight and. Protect your container from heat and moisture with high-quality venting solutions.
