

# **Why can't i delete the solar container application photos**

## Overview

---

There is currently a container running that uses the image you are trying to delete. We will solve this issue by first stopping the container and then deleting the image Warning: Deleting the image is dangerous since you cannot undo deleting the image !. Why can't we remove images after starting containers from them?

Isn't everything physically copied into the container anyway?

I had to commit a 30Gb running container into a new image to be able to start new container based on that with added volume. Now I have 30GB container and 30GB image I can't. When you no longer need a Docker image, you can remove it using the `docker rmi` command. However, it's important to understand that you can only remove an image if it's not being used by any running containers. When attempting to remove a Docker image using the `docker rmi` command, you may encounter. It's possible the error message is providing some usable guidance, i.e. You mention listing images, but it would be useful to see which containers are running on your system. Try this command I suspect you'll see a running container with the id `008b2b2bbf35`. If you do, you can stop the container by. On docker documentation page, it says " You cannot remove an image of a running container unless you use the `-f` option." but still I'm unable to remove image using `-f`. What can be the explanation for this?

Should there a correction in documentation?

The image provides most of the actual filesystem. There is currently a container running that uses the image you are trying to delete. We will solve this issue by first stopping the container and then deleting the image Warning: Deleting the image is dangerous since you cannot undo deleting the image ! Also note that force-stopping a running. You can delete container images from your container registry. To automatically delete container images based on specific criteria, use garbage collection. Alternatively, you can use a 3rd-party tool to create a CI/CD job for deleting container images from specific projects. To delete specific.
